This Book is brought to you for free and open access by the Covid-19 Archive: Items at Carleton Digital Commons. It has been accepted for inclusion in Covid-19 Archive: Documents by an authorized administrator of Carleton Digital Commons. For more information, please contact digitalcommons.group@carleton.edu.

How To Set Up Your Workstation

To improve comfort, safety, and productivity anywhere

Raise the top of your monitor to eye level or below

Screen distance should be an arm's length away (18-30")

Keep elbows at your sides and rest gently on armrests

Maintain neutral wrists and forearms parallel to ground

Rest feet flat on the floor with knees at or below hip level
Leave 1" to 2" space between calves and the seat's edge

Using A Laptop?

Raise your laptop to eye level
Try a stand, box, or step stool

And use a separate keyboard and mouse

Or use a monitor and type on your laptop
If you have a keyboard, mouse, and monitor, raise your laptop off to the side to use as a dual monitor

Sinking In Your Deep Couch?

Use a pillow to shorten the seat
A pillow or towel roll can also be used for lumbar support

Work Surface Too High?

Use a taller chair or raise your seat with a cushion

Use a footrest or box to support your legs from dangling

Type on a lower surface like a keyboard tray, lap desk, or side table

Prefer To Stand?

Find a counter or tall surface

Wear comfortable shoes

Try standing on a kitchen mat

Take A (micro) Break

Every hour
for at least five minutes

Get Moving

Try Microbreak Exercises

When you exercise and move around, you activate your muscles and help improve circulation, energy, and mood. At the very least look away, stretch, get up, or walk. This can help you feel refreshed when you resume your work. Giving your body a break from prolonged and/or repetitive activities can help reduce your risk of injuries.

Change Positions

The Next Position is the Best Position

No matter how good your posture is, if you have not moved in an hour, you are still loading the same structures in your body in the same direction for an hour.

Switch It Up

Take active breaks by changing how you perform a task to reduce risk of repetitive motion injuries. *If able, try standing, varying your sitting positions, standing with one leg forward, switching hands, changing locations or alternating tasks.*

Check Your Posture

Check In With Yourself

Bring your equipment to you instead of conforming your body to your equipment. Try setting a timer every 30 minutes to identify and correct any awkward postures. *Have you been hunched over your laptop? Leaning on your elbow? Crossing your legs? Rotating your neck to the right? Holding your fingers up when mousing?*

Be Well

Stay Hydrated

Remember to keep drinking plenty of fluids. Take opportunities for water breaks.

Take Care of Yourself

You can work more effectively and comfortable when taking care of all aspects of your health and wellness.

Reduce Eye Strain and Fatigue

Protect Your Eyes

20 Every 20 minutes of screen time

20 Look away for ≥ 20 seconds

20 At something ≥ 20 feet away

Hydrate Your Eyes
Remember to blink

Minimize glare
Avoid facing or having your back to a window
